

Non-Latin scripts

inkmd embeds a font for text the 14 base PDF fonts cannot represent. Cyrillic, Greek, and Latin-Extended render through the bundled DejaVuSans (or any TrueType font passed with `font_path=`). A codepoint no available font covers shows a visible `[U+XXXX]` marker rather than a silent `?`, and inkmd emits a warning so the gap is machine-detectable.

Scripts the bundled font covers

These lines render as real glyphs, selectable and copyable from the PDF.

- Russian (Cyrillic): Здравствуйте, мир. Числа 2026 и знаки препинания.
- Ukrainian (Cyrillic): Привіт, світе. Ганок, їжак, юшка.
- Greek: Γειά σου, κόσμε. Τόνοι και διαλυτικά: προϊόν, γάιδαρος.
- Polish (Latin-Extended): Zażółć geślą jaźń.
- Czech (Latin-Extended): Příliš žluťoučký kůň úpěl ďábelské ódy.
- Turkish (Latin-Extended): İstanbul, ğ, ş, ı, ç, ö, ü.
- Vietnamese (Latin-Extended): Tiếng Việt rất đẹp và phong phú.

A note on tables

Embedded-font routing does not yet reach table cells: column widths are computed before the run split, so non-WinAnsi text inside a cell still renders `?` (a known limitation, fix pending). The same names render correctly in the prose list above.

Script	Sample in a cell	Result
Cyrillic	??????	renders ? (table-cell limitation)
Greek	?????	renders ? (table-cell limitation)
Latin-Extended	Gda?sk	the WinAnsi letters render; ? shows ?

Scripts the bundled font does not cover

The bundled DejaVuSans has no CJK glyphs. Each CJK codepoint renders a visible `[U+XXXX]` marker instead, and inkmd raises one `MissingGlyphWarning` naming the missing codepoints. Full CJK rendering is a planned later font pack.

- Japanese: `[U+65E5][U+672C][U+8A9E]`
- Chinese: `[U+4F60][U+597D][U+4E16][U+754C]`
- Korean: `[U+C548][U+B155][U+D558][U+C138][U+C694]`

Mixed scripts in one line

inkmd splits a run per codepoint, so a single line can switch scripts and route each part to the right path: English stays on the base-14 font, Cyrillic and Greek go to the embedded font, and CJK falls to a marker.

The badge read "Welcome, Добро пожаловать, Καλώς ορίσατε, [U+6B22][U+8FCE]" in four scripts at once.
